SAP Supply Chain Control Tower

How can SAP® solutions enable you to change the game?

With SAP solutions, companies can better understand, analyze, manage, and respond to variability within their supply chains. The Control Tower provides alerts, KPIs, reporting and insights which detect and notify users of potential disruptions, whilst cause-and-effective analysis and what-if simulations enable users to take effective corrective action and respond rapidly.

What do SAP solutions help customers do?

Gain in-depth insights into Supply Chain
Integrate performance data from various systems and get ONE view

Make Better decisions
Simulate and compare different options, before making decisions.

Fast problem resolution
Drive fast, collaborative actions within a Team

Business Network Collaboration
Work with external partners for easier and faster planning

What are the benefits?

SAP Supply Chain Control Tower helps companies to get end to end visibility, resulting in:

- Proactive issue resolution through increased visibility and orchestration
- Increased responsiveness through real-time decision making capabilities
- Better decision making across the supply chain
- Lower inventory costs due to multitier visibility into inventory, demand, and supply
- Improved customer service with effective alert and exception management

Why SAP?

Only SAP can bring information from planning, execution and the network to anyone who needs it in real time. SAP provides users with advanced performance management, alert management and analytics in a powerful collaborative environment, to ensure a fast response rate and effective problem resolution.
